

Argos Relief Valve

Description

The Argos pilot-operated regulator is one of a series of regulators that have been developed by Gascat. The top entry design pressure regulator is used for all types of natural gas and industrial gas applications and is designed so that maintenance is easy and can be done without taking the regulator out of the pipeline.

The Argos has a temperature range of -10°C to $+60^{\circ}\text{C}$ and regulation from 0.7 to 45 bar, it is light and easy to handle, has a superior pressure control performance and an excellent flow capacity.

Technical Specification

Materials:

- Body: Carbon Steel ASTM A216 Gr. WCB
- Internals: Brass / Stainless Steel
- Cage: Hard Aluminium
- Seals: Buna N
- Diaphragm: Buna N / Hydrin

Connections:

- 1", 2", 3", 4"
- Flanged ANSI 150#RF / 300#RF
- Other constructions and sizes under review

Limits of Operation:

- Temperature: -10°C to $+60^{\circ}\text{C}$
- Pressure Regulating Range: 0.7 to 45 bar
